

SECURE NETWORK-AS-A-SERVICE FOR COMMUNICATION SERVICE PROVIDERS

Harmony SASE expands CSP managed service revenue opportunities by enabling the delivery of networking and security from the cloud edge

Harmony
SASE

As the modern business and threat landscape continue to evolve, Communication Service Providers (CSPs) are primed to be the transformation agents their clients are seeking. The emergence of 5G and the standardization of work from anywhere have proven that the internet is the “new” corporate network. This transformation creates opportunities for CSPs who play a critical role in delivering the secured network infrastructure services their clients need.

Protect Your Clients and Grow Your Business with Confidence

Today, workers connect from anywhere and can access the organization’s network from far beyond the traditional network perimeter. As bring-your-own-device proliferates, and as more critical workloads run in the cloud, it is more important than ever to enhance security and automation across network locations to ensure that employees and subscribers remain secure.

Harmony SASE enables CSPs to deliver a differentiated and profitable secure network-as-a-service offering that allows their customers to leave the pain of legacy solutions behind.

CSP Customer Use Cases

Zero trust remote access to on-premises and cloud workloads and resources

Protection against Internet-borne malware and malicious websites

Secure access to SaaS applications

Branch interconnectivity leveraging a full-mesh network

Granular control of access to infrastructure resources and devices

Prioritized traffic rules within each network for role-based access

Provide a managed network-as-a service solution that secures employees inside and outside the office

Support your clients with an automated, policy-driven approach to preventing security vulnerabilities. Offer a managed solution that ensures unauthorized users and devices cannot access the network and cloud resources, protecting the underlying infrastructure.

Global coverage

With over 75 data centers globally, we make it easy to provide global services and connectivity.

Maximize your margins and create a recurring revenue offering

Harmony SASE's scalable software requires no hardware, saving your customers thousands of dollars yearly. And with a SaaS-based subscription model you can benefit from a recurring revenue stream.

Pay-as-you-go provides convenience and manageability

Harmony SASE is available via a consumption-based model for your clients who prefer the option of dynamic pricing.

Scale networking and security as your clients grow

Get your clients up and running fast. Our technology enables you to quickly deploy tenants' complex networks without tedious configuration or hardware, and easily add features and users as your clients' needs expand.

Harmony SASE Empowers Communication Service Providers' Delivery

Our award-winning platform offers our CSP partners a powerful, scalable and simple Network-as-a-Service to keep your clients' traffic and data secure.

- Multi-tenant console & centralized management
- Seamless cloud integration

- Single Sign-On secure remote access
- Multifactor Authentication (MFA)
- OKTA / Entra ID / SAML 2.0 / AD integration
- Zero Trust Network & Application access

Certified SOC 2 Type 2, GDPR, HIPAA, and ISO 27001 & 27002 Compliant

We adhere to the highest standards of software security compliance, so you can rest assured that your clients' data remains fully protected.

Meet Harmony SASE

2x Faster Internet Security | Full Mesh Private Access | Secure SD-WAN

The internet is the new corporate network, leading organizations to transition to SASE. However current solutions break the user experience with slow connections and complex management.

Harmony SASE is a game-changing alternative that delivers 2x faster internet security combined with full mesh Zero Trust Access and optimized SD-WAN performance—all with an emphasis on ease-of-use and streamlined management.

Combining innovative on-device and cloud-delivered network protections, Harmony SASE offers a local browsing experience with tighter security and privacy, and an identity-centric zero trust access policy that accommodates everyone: employees, BYOD and third parties. Its SD-WAN solution unifies industry-leading threat prevention with optimized connectivity, automated steering for over 10,000 applications and seamless link failover for uninterrupted web conferencing.

Using Harmony SASE, business can build a secure corporate network over a private global backbone in less than an hour. The service is managed from a unified console and is backed by an award-winning global support team that has you covered 24/7.

Harmony SASE is part of the Harmony for Workspace Suite. Harmony helps organizations of all sizes secure their workspaces with a suite of products covering network security across browsers, devices, and cloud.
